for *How Much Can a Scrabble Move Score? Exact Records from One Tile to Seven*

Rules and Certificate Guide

Columns A–O run left to right and rows 1–15 top to bottom; H8 is the centre. The first move covers H8. A later move places one to seven tiles in one row or column. Every new maximal string of length at least two must be in the stated dictionary. Premiums apply only when first covered. A seven-tile move earns 50 extra points. **Tile supply and face values.**

NWL23 has 212,868 exported entries, of which 196,601 have board length 2–15. CSW24 has 299,162 exported entries, of which 280,887 have board length 2–15.

The binary dictionaries are decoded as little-endian 32-bit directed-acyclic-word-graph nodes. A depth-first traversal emits a word precisely at an accepting node; sorting the emitted uppercase strings gives the word lists hashed above.

The public driver scripts/reproduce_release.py regenerates every upper-bound search and invokes separate forward verifiers for every history.

The following tables list every tile-placement turn; omitted intervening turns are passes, while rack refills and draws remain in the JSON certificates.
